

Assessing Measurement Models

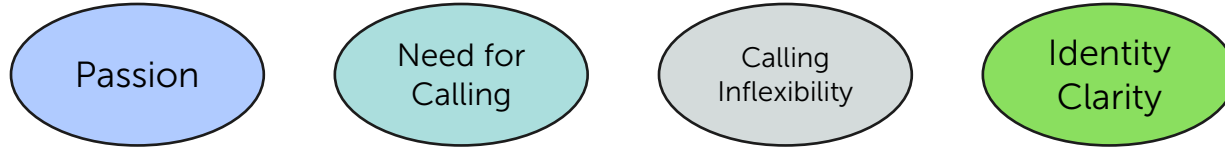

Leander De Schutter

- Study on Career calling in academia
- Several distinguishable subdimensions such as
 - Passion
 - Need for calling
 - Calling inflexibility
 - Clear career identity
- **Survey with items that measure each of these dimensions**

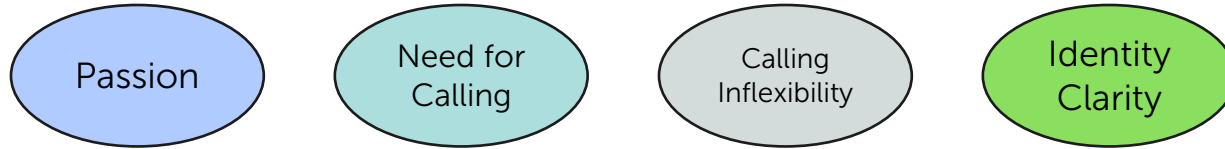

Our proposed measurement model

What we want to know: people's true level of

But we cannot directly measure them

Our proposed measurement model

What we know: ratings on statements

P1	P2	P3	N1	N2	N3	N4	N5	N6	N7	I1	I2	I3	I4	I5	C1	C2	C3	C4
----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----

E.g., **P1**: "I am passionate about what I am studying"

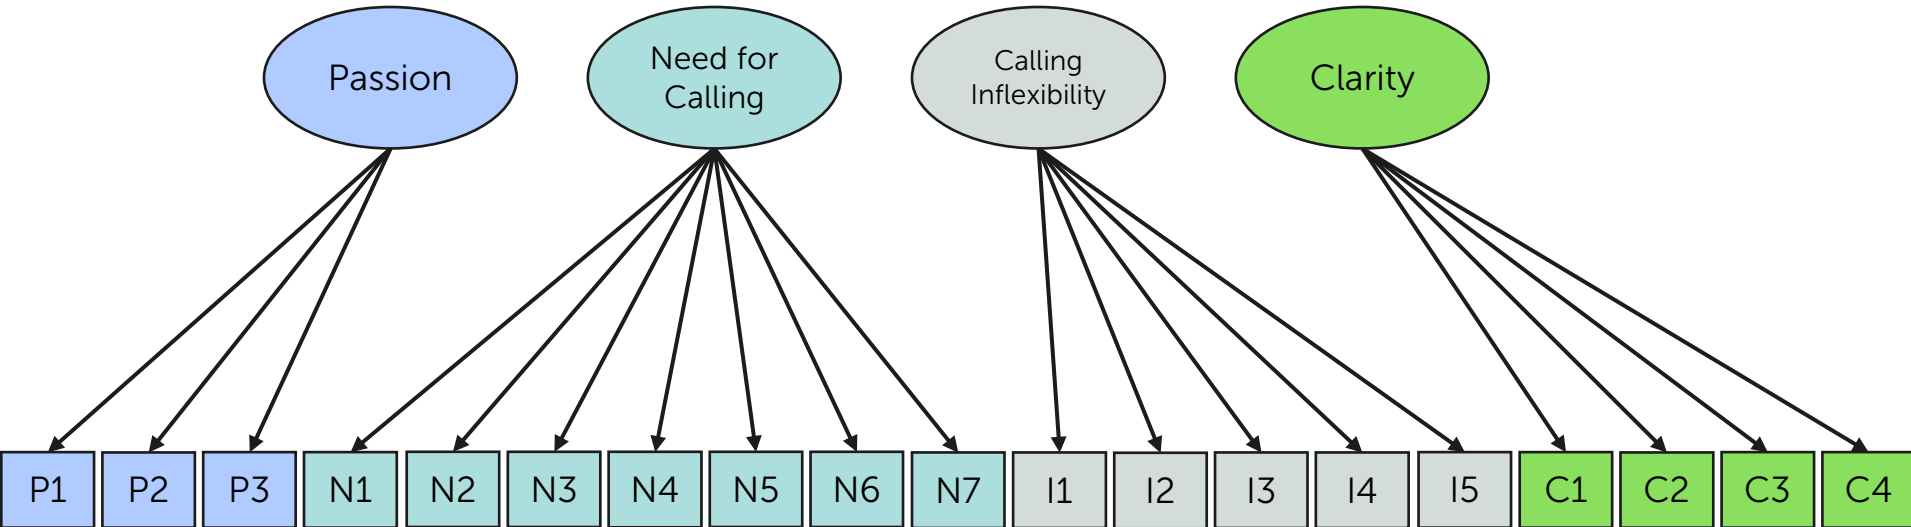

How respondents see the survey

	Please indicate the extent to which you agree with the following statements	1 (strongly disagree)	2	3	4	5 (strongly agree)
P1	I am passionate about what I am studying					
P2	I enjoy what I study more than anything else					
P3	This line of studies gives me immense personal satisfaction					
N1	I need to realize myself at work					
N2	I need to feel a vocation for work					
N3	I need to have passion for my work					
N4	I need to find a job that has a great meaning for me					
N5	I need to do a job for which I have a bent					
N6	I need to find a job that is useful to others					
N7	I need to feel "called" to do my job					
I1	No other field of study inspires the same passion in me					
I2	I feel that there are other areas for which I am bent for					
I3	I feel this is the only path for me					
I4	The path I took is the only one that can give meaning to my life					
I5	I feel that there are other areas in which I can realize myself					
C1	I have clear career goals					
C2	I know what my professional identity is					
C3	I know what my future career is					
C4	I have a clear idea of my future career					

What we will test

		1 (strongly disagree)	2	3	4	5 (strongly agree)
P1	I am passionate about what I am studying					
P2	I enjoy what I study more than anything else					
P3	This line of studies gives me immense personal satisfaction					
N1	I need to realize myself at work					
N2	I need to feel a vocation for work					
N3	I need to have passion for my work					
N4	I need to find a job that has a great meaning for me					
N5	I need to do a job for which I have a bent					
N6	I need to find a job that is useful to others					
N7	I need to feel "called" to do my job					
I1	No other field of study inspires the same passion in me					
I2	I feel that there are other areas for which I am bent for					
I3	I feel this is the only path for me					
I4	The path I took is the only one that can give meaning to my life					
I5	I feel that there are other areas in which I can realize myself					
C1	I have clear career goals					
C2	I know what my professional identity is					
C3	I know what my future career is					
C4	I have a clear idea of my future career					

Our proposed measurement model

We assume that the latent ("hidden") constructs "give rise to" high values of the indicators.

Our proposed measurement model

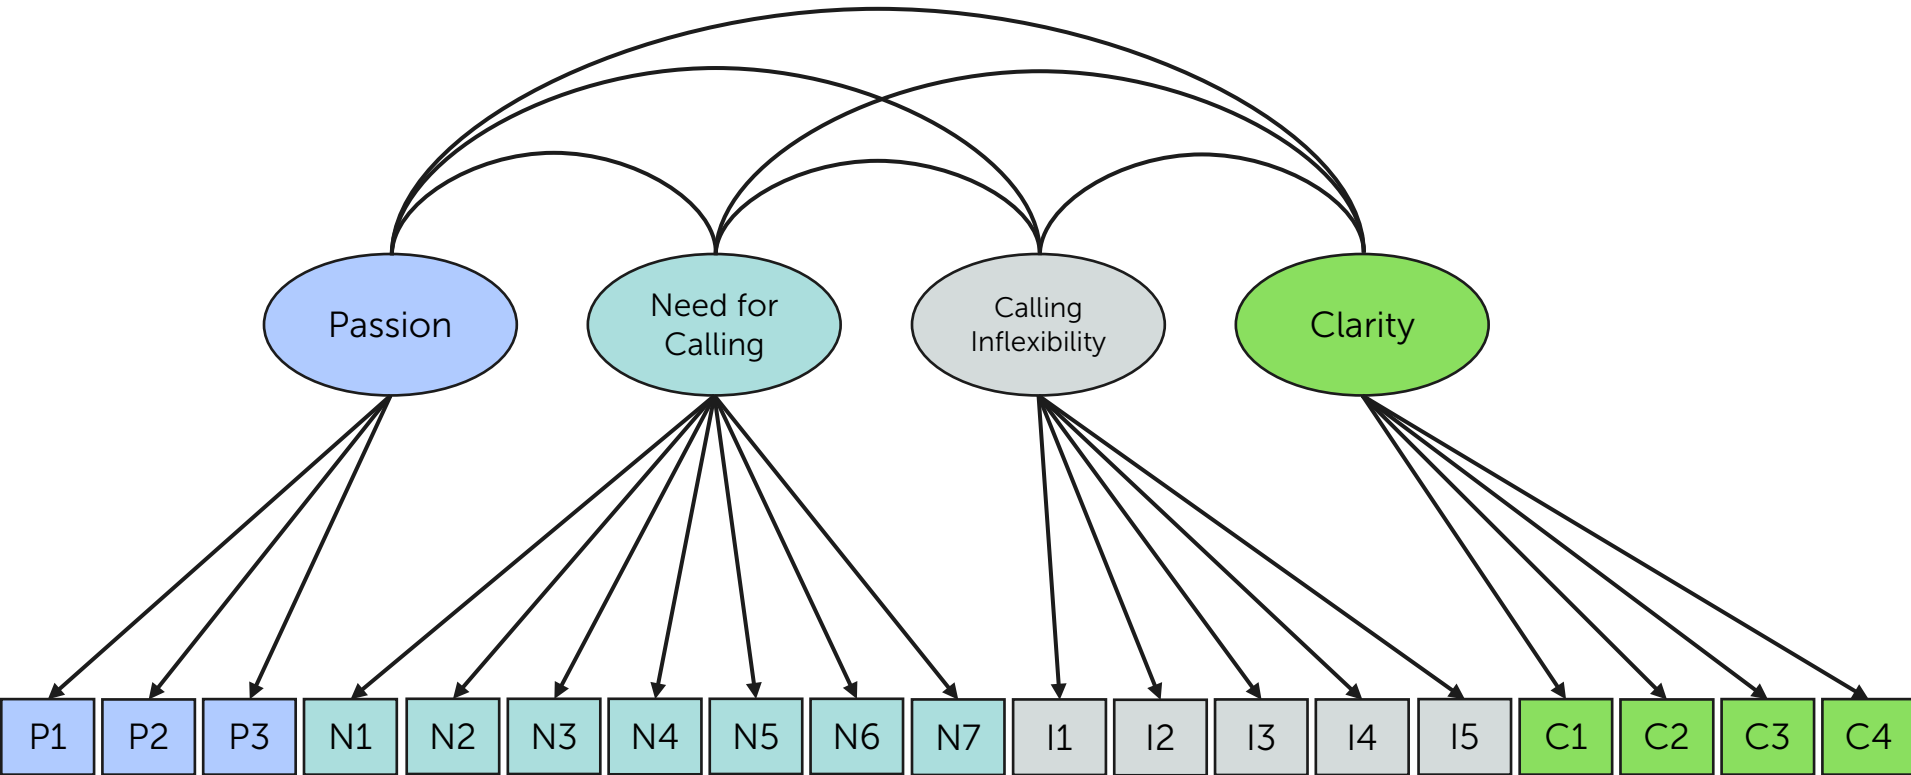

We assume that the latent ("hidden") constructs "give rise to" high values of the indicators.

- Are our measures **consistent with our understanding** of the construct?
 - Do the items from the same scale also cluster around one single construct
 - Do the four constructs sufficiently cover the pattern in the data
 - Is there convergent/discriminant validity
- **Method bias?** E.g., positive correlations because some people just agree with everything

→ **CFA to show we measured different constructs and rule out bias**

Our proposed measurement model

We assume that the latent ("hidden") constructs "give rise to" high values of the indicators.

Nested Model: Are passion and need really distinct?

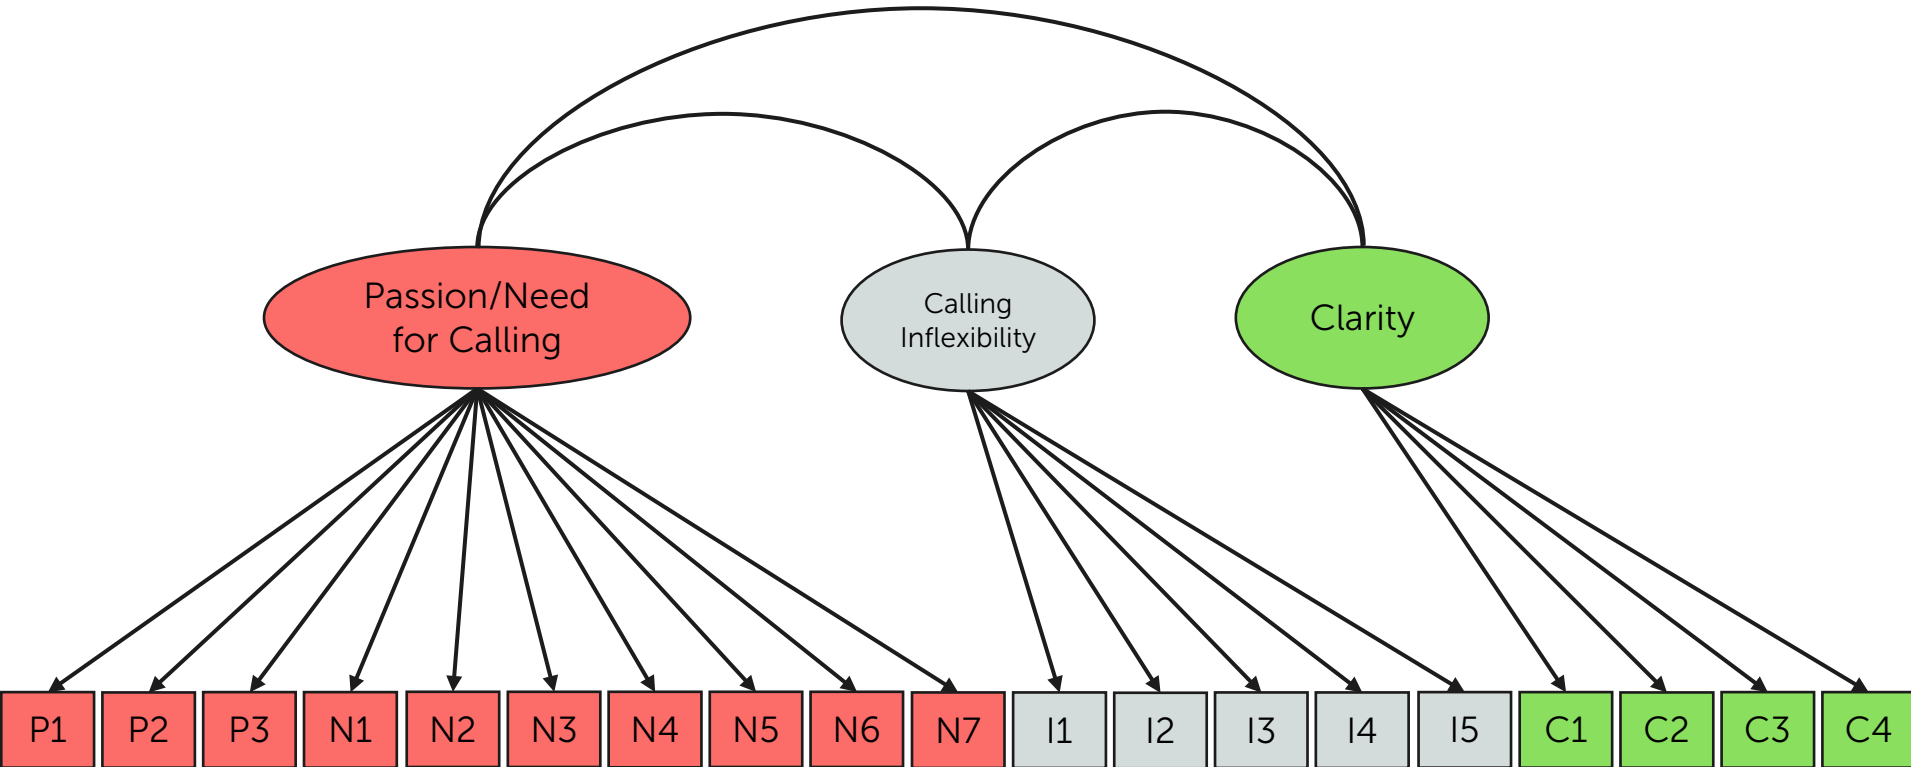

Table 2
Model Fit Results for Confirmatory Factor Analyses in Study 1

Models	χ^2	<i>df</i>	$\Delta\chi^2/\Delta df$	SRMR	RMSEA	CFI	TLI
Hypothesized five-factor model	107.09	67		.04	.05	.98	.97
Four-factor model—combining subordinate self-serving attribution and subordinate psychological entitlement	269.11	71	162.02/4***	.09	.10	.88	.85
Four-factor model—combining leader humility and subordinate psychological entitlement	589.23	71	482.14/4***	.14	.16	.69	.60
Four-factor model—combining subordinate psychological entitlement and workplace deviance	279.58	71	172.49/4***	.09	.10	.87	.84

Note. Δ = change relative to the measurement model; CFI = comparative fit index; TLI = Tucker-Lewis index; RMSEA = root mean squared error of approximation; SRMR = standardized root mean-square residual.

*** $p < .001$.

The hypothesized six-factor model (i.e., each construct modeled as a separate factor) fit the data well, $\chi^2(155) = 691.469$; CFI = .961; RMSEA = .057; SRMR = .043, with all factor loadings being high ($\geq .476$) and significant ($p < .001$). This six-factor model demonstrated better fit than a two-factor model distinguishing between the Time 1 and the Time 2 variables, $\Delta\chi^2(14) = 5,513.941$, $p < .001$, and a one-factor model, $\Delta\chi^2(15) = 7,723.070$, $p < .001$.

- Steep learning curve (e.g., learning lavaan or Mplus)
 - Tediously coding every CFA model separately
 - Manually compare models
 - Iteratively putting output in a table
- Measurement assessment often ignored
- I wrote an app that makes measurement assessment considerably easier

Item-level assessment

		1 (strongly disagree)	2	3	4	5 (strongly agree)
P1	I am passionate about what I am studying					
P2	I enjoy what I study more than anything else					
P3	This line of studies gives me immense personal satisfaction					
N1	I need to realize myself at work					
N2	I need to feel a vocation for work					
N3	I need to have passion for my work					
N4	I need to find a job that has a great meaning for me					
N5	I need to do a job for which I have a bent					
N6	I need to find a job that is useful to others					
N7	I need to feel "called" to do my job					
I1	No other field of study inspires the same passion in me					
I2	I feel that there are other areas for which I am bent for					
I3	I feel this is the only path for me					
I4	The path I took is the only one that can give meaning to my life					
I5	I feel that there are other areas in which I can realize myself					
C1	I have clear career goals					
C2	I know what my professional identity is					
C3	I know what my future career is					
C4	I have a clear idea of my future career
